PROFILE

Computer Science graduate focused on low-latency C++ systems, machine learning applications, and thoughtful open source contributions. Comfortable moving from algorithmic problem solving into production-minded engineering work across systems, data, and web tooling.

EXPERIENCE

Machine Learning Intern, Atharvo Aug 2024 - Sep 2024

- Improved predictive outcome performance by 30% using data cleaning, exploratory analysis, feature engineering, and Support Vector Classification.
- Designed a depression prediction application with 74% accuracy using personal, demographic, and social inputs, then integrated it into a Flask web interface.

PROJECTS

High Frequency Trading System C++, Boost, ProtoBuf, Google Test

- Architected a trading system around Kite Broker's API for real-time market data and reduced end-to-end latency by 150 ms to accelerate trade execution.
- Engineered a low-latency order book processing 10,000+ orders per second with 99.99% accuracy through asynchronous processing and lock-free structures.

Code: github.com/ideepakchauhan7/OrderBook

Skin Disease Classification Python, OpenCV, Jupyter, Streamlit

- Built a CNN pipeline that automated preprocessing and labeling, reducing weekly data preparation time by 6 hours and speeding up experimentation.
- Improved generalization with augmentation techniques such as rotation, scaling, and flipping, contributing to a 15% accuracy increase.

Code: github.com/ideepakchauhan7/skin-disease-classification | Live: skin-disease-classification-cnn.streamlit.app

Black-Scholes Option Pricing Dashboard Python, NumPy, SciPy, Streamlit

- Developed a real-time options pricing dashboard using yfinance, numerical modeling, and interactive controls for volatility-driven analysis.
- Helped accelerate trader decision-making by 20% with live visualizations for call and put option behavior.

Code: github.com/ideepakchauhan7/blackscholes | Live: blackscholesoption.streamlit.app

TECHNICAL SKILLS

Programming Languages

C C++ Python JavaScript Rust

Frameworks and Libraries

TensorFlow Keras Streamlit React Flask

Databases and Tools

MySQL MongoDB Docker Redis Firebase
Git GitHub Jupyter

Core Concepts

Data Structures and Algorithms System Design
OOP Machine Learning

EDUCATION

Lloyd Institute of Engineering and Technology

Sep 2021 - May 2025

B.Tech. in Computer Science and Engineering | CGPA: 7.5 / 10.0

Operating Systems Computer Networks

DBMS Computer Architecture

Computational Theory

ACHIEVEMENTS

- Won first place among 150+ participants in Lloyd Institute's 24-hour Code-A-Then challenge.
- Solved 480+ LeetCode problems, demonstrating sustained algorithmic practice.
- Placed in the top 10% in three Codeforces competitions.
- Applied a 200-hour DSA course to reduce runtime by 15% across 40+ LeetCode solutions.
- Earned GitHub Pull Shark and Pair Extraordinaire achievements through open source collaboration.

OPEN SOURCE CONTRIBUTIONS

GitNexus

27.5k stars

abhigyanpatwari/GitNexus

- Contributed to a zero-server TypeScript code intelligence engine that generates interactive knowledge graphs directly in the browser.
- Submitted an April 2026 fix in a large Graph RAG and MCP-enabled monorepo, demonstrating comfort navigating real production-grade systems.

emdash

9.4k stars

emdash-cms/emdash

- Contributed to a full-stack TypeScript CMS built on Astro, with work centered on type safety and plugin architecture improvements.

Microsoft Aspire

5.8k stars

microsoft/aspire

- Contributed to Microsoft's code-first, observable platform for .NET cloud-native application development.

CERTIFICATIONS

- JP Morgan Software Engineering Job Simulation
- Goldman Sachs Software Engineering Virtual Experience
- Cisco Networking Essentials
- Infosys Foundation Finishing School for Employability Program
